

NATURAL TIME COUNCIL

XV VISION COUNCIL, "THE CALL OF THE WATER". CAYUCO MAYA, BACALAR, QUINTANA ROO, MEXICO

ACTIVITY REPORT:

The Vision Council, "The Call of the Water" took place in Bacalar, Quintana Roo, due to the nature of the site, characterized by its incredibly beautiful lagoon, also known as the "Seven Colors Lagoon". The Laguna Bacalar is 42 km long and is facing the threat of non-sustainable touristic development.

The XV Vision Council had one main objective; the creation of a Peace Village conformed by 9 different Councils. Ecology, Youth, Spirit, Health, Natural Time, Children, Social Movements, Education and Art and Culture. All 9 Councils focus their activities towards the generation of awareness and actions oriented towards the preservation of this ecological reserve. The most important element in this site is this sweet body water, known to have the highest vibratory frequency in the planet. The Laguna Bacalar also contains very important bacteria that must be preserved, the "STROMATOLITES", found only on very few water bodies in the planet.

Stromatolites in the Bacalar Lagoon

“Stromatolites are layered mounds, columns, and sheet-like sedimentary rocks. They were originally formed by the growth of layer upon layer of cyanobacteria, a single-celled photosynthesizing microbe that lives today in a wide range of environments ranging from the shallow shelf to lakes, rivers, and even soils.

The importance of stromatolites is twofold. Firstly, they represent one of the earliest known forms of life capable of making macrostructures that can be identified “relatively” easily in the fossil record, making them one of the earliest life forms for which we can find relatively abundant fossil evidence. Finding them and dating them therefore helps us narrow in on the date for the first emergence of life on earth.

The second is that some modern stromatolites are made by oxygen producing cyanobacteria. We don’t know for certain which if any of the ancient stromatolites fossils were also made by oxygen producing cyanobacteria, but it is reasonable to assume that at least some where, which means finding and dating stromatolites fossils also allows us to narrow in on the timing of when molecular oxygen started to become more abundant in earth’s atmosphere.

Modern freshwater stromatolites

Laguna Bacalar in Mexico's southern Yucatán Peninsula in the state of Quintana Roo, has an extensive formation of living giant microbialites (that is, stromatolites or thrombolites). The microbialite bed is over 10 km (6.2 mi) long with a vertical rise of several meters in some areas. These may be the largest sized living freshwater microbialites, or any organism, on Earth.^[26]

A little farther to the south, a 1.5 km stretch of reef-forming stromatolites (primarily of the Scytonema genus) occurs in Chetumal Bay in Belize, just south of the mouth of the Rio Hondo and the Mexican border.^[27]

Freshwater stromatolites are found in Lake Salda in southern Turkey. The waters are rich in magnesium and the stromatolite structures are made of hydromagnesite.^[28]

Another pair of instances of freshwater stromatolites is at Pavilion and Kelly Lakes in British Columbia, Canada. Pavilion Lake has the largest known freshwater stromatolites and has been researched by NASA as part of xenobiology research.^[29] NASA, the Canadian Space Agency and numerous universities from around the world are collaborating on a project centered on studying microbialite life in the lakes. Called the "Pavilion Lake Research Project" (PLRP) its aim is to study what conditions on the lakes' bottoms are most likely to harbor life and develop a better hypothesis on how environmental factors affect microbialite life. The end goal of the project is to better understand what conditions would be more likely to harbor life on other planets.^[30] There is a citizen science project online called "MAPPER" where anyone can help sort through thousands of photos of the lake bottoms and tag microbialites, algae and other lake bed features.^[31]

Microbialites have been discovered in an open pit pond at an abandoned asbestos mine near Clinton Creek, Yukon, Canada.^[32] These microbialites are extremely young and presumably began forming soon after the mine closed in 1978. The combination of a low sedimentation rate, high calcification rate, and low microbial growth rate appears to result in the formation of these microbialites. Microbialites at an historic mine site demonstrates that an anthropogenically constructed environment can foster microbial carbonate formation. This has implications for creating artificial environments for building modern microbialites including stromatolites."

This is why the Cayucos, Maya in Bacalar was chosen as the site for the XV Vision Council, "The Call of the Water". A Paradise on Earth, with clear, pristine water, and amazingly beautiful spaces where time is calm, enriched by its beautiful people whose smile is inviting us to stay.

The Vision Council began in the spring, of 1990 and is now on its XV gathering. An inspiration of Alberto Ruz Buenfil, Cosmic Blue Monkey, activist, ecologist, man of caravans and a very close friend to Valum Votan. They called each other "hermonos", a game of words which has changed the word "hermanos", which in Spanish means brothers and would mean monkey brothers, since they are both monkeys in the Tzolkin.

In the history of the Vision Council, the 13 Moons/28 day Peace Movement has always had presence and since 2010 it formally became the Natural Time Council.

This year, the Seed Facilitators of the Natural Time Council, Blue Overtone Eagle Noelle and White Cosmic Wizard Karina invited as special guests: Blue Crystal Storm Mertxe, White Electric Mirror Luis and Yellow Self-Existing Seed Cecilia. We also had the support of Earth Wizards and Fire Bearers Yellow Solar Star Ana Rosa, Yellow Self-Existing Seed Zaira, And Red Lunar Skywalker Roxane who were in charge of keeping harmony and esthetics in our place.

The Natural Time Council had great magnetism and a lot of acceptance from participants in the event.

We were very fortunate, since we enjoyed a very special spot by the shore of the lagoon, a space that seemed to be waiting for us, a structure made out of palm and rock, like a cabin with no walls, and from which we could enjoy the turquoise blue landscape, with a cool breeze that waved all the hanging posters of the Tzolkin, 13 Moons, Hunab Ku 21 and Synchronotron matrixes, Archetypes and Circunpolar Rainbow, working as a magnet, attracting curious participants, asking for information and making them feel at a stellar home .

The Synchronotron matrixes vibrating at a higher tone, were rapidly the protagonists through their numbers. One could see participants moving their heads attentively, following the sequences and variants of the numbers. Crystal turquoise blue water, a green carpet and palm trees offering shade completed the scenery, an image of indescribable calm and peace.

Early, every morning, we gathered around the altar, prayed the 7 Galactic Directions Prayer, followed by a few mini-wholes of the Natural Mind Meditation, the reading of the Synchronic Order of the day, Synchrogalactic Yoga, Telektonon and ending with Hunab Ku 21, the main objective of this transmission.

From there came breakfast time and the Plenary, a space where all participants attended to listen to announcements of workshops and other logistic needs. Every morning there was a bulletin board announcing activities of each council, and of course there was also The Natural Time Council activity plan for the day posted. The activities announced were workshops for beginners and advanced participants. This was only possible because of the great team of kin we conformed.

All through the day, there was a constant flux of interested participants, many of which expressed their interest of knowing their galactic signature, and who were trapped by a deeper interest to go further in this knowledge. So for most of participants in the Natural Time Council, they at least learned how to use a

Synchronometer. Many furthered their knowledge towards the Hunab Ku 21, plus those who already had the basis to learn it.

There were moments in the day where one could appreciate different groups working according to their level of knowledge. One group for 13Moons/28 days and Tzolkin, another for the 5th Force Oracle and another for the Hunab Ku 21.

There was a total of 450 pocket calendars given for free, most of them given in our space as a teaching tool, others personally requested.

The last activity of the Vision Council was named “The Harvest”. All participants flowed as one body from council to council, where they would listen to their final Manifesto for the Water in accordance to their perspective in how to preserve The Bacalar Lagoon. When hundreds of people arrived to the Natural Time Council, Yellow Self-Existing Seed Cecilia read out loud the MANIFESTO FOR THE NOOSPHERE where José Argüelles/Valum Votan gives voice to the Earth. There was great emotion expressed by participants due to its profound truth. At the end of the reading, we all repeated in one voice:

“I am one with the Planet
The Planet and I are One Mind”

It was truly beautiful the feeling of warmth coming from those people who were receiving their Galactic Signature, many of them expressing that they were receiving an answer to something they had been looking for a long time. This was a reminder of the importance of this transmission, the Calendar Change of the 13 Moon of 28 days. Sparkles radiated from the eyes of those who received the Hunab Ku 21 information.

An important reflection from this experience, is that we need to prepare, get stronger, go deeper and integrate this information, so we can be ready to divulge and transmit the Law of Time with more faithfulness and integrity.

And of course, the Rainbow too had presence in the Vision Council

We all left with a clear sensation that this was not the last time we would visit this piece of paradise: THE CAYUCO MAYA IN THE LAGUNA BACALAR

Our appreciation for all the love and hospitality of Don Miguel Jaime, Red Magnetic Dragon, dreamer and guardian of this sacred site. Also, our appreciation to Coyote Alberto Ruz and to all other councils for keeping the dream alive and making it real.
